PROMO CODES FOR ONLINE

Navigation Steps: Promo Code Setup

Create a Percentage Discount – From Settings → Register Settings → Discounts, create or confirm a percentage-based Discount. Set the name, percentage off, and the schedule (start/end date and time). This Discount controls when the promo code will be valid.

Create a Promo Code – From Settings → Register Settings → Promo Codes Management, click Add Promo Code, then enter the code (e.g., BLACKFRI20). Optionally include a description and highlight text for staff visibility. Link the promo to the previously created Discount. Save.

Feature Explanation: Facilities can now create promo codes for online gift card and voucher sales. These codes apply percentage-based discounts at checkout and follow the schedule of the linked Discount. If the customer doesn't prepay, the discount is still honored at check-in. This provides a flexible promotional tool for seasonal sales or marketing campaigns.

Online Checkout: Customer Enters Code at Checkout – When purchasing a gift card or voucher online, the customer enters the promo code on the payment screen. The discount is applied instantly. If the customer doesn't prepay, the code is stored on the order and honored at check-in.

Tips & Tricks:

- Promo codes currently support percentage discounts only.
